

REQUEST FOR PROPOSAL (RFP)

AI-Powered Autonomous Threat Intelligence & PenTesting Suite

Automated adversary emulation, continuous vulnerability discovery, and dark web intelligence

ISSUING ORGANIZATION & KEY DETAILS

Issuing Entity:	OmniCyber Defense (omnicyber.com)
Primary Contact:	Nathan Drake, VP of Threat Intelligence
Direct Inquiries:	nathan.drake@omnicyber.com
Publication Date:	October 2026
Estimated Contract Value:	\$5,000,000 USD
Procurement Protocol:	Competitive Sealed Proposal (Phase-Gate Evaluation)

NOTICE: The information contained in this Request for Proposal is confidential and proprietary to OmniCyber Defense. By accepting this document, prospective vendors agree to hold all technical architectures, commercial terms, and proprietary data in strict confidence under non-disclosure provisions.

1. Objective

OmniCyber Defense protects critical infrastructure and government aerospace contractors. We require an Autonomous Threat Intelligence & Continuous Automated Penetration Testing (BAS/CART) system.

The solution must proactively identify external attack surfaces, emulate sophisticated adversaries (APT28, APT29, Lazarus), and validate defensive control efficacy.

2. Core Technical Capabilities

- Autonomous Red Teaming: Safe, non-destructive breach-and-attack simulation (BAS) mapped to MITRE ATT&CK Enterprise v14 matrix.
- External Attack Surface Management (EASM): Continuous asset discovery for unmanaged IP ranges, forgotten subdomains, and exposed cloud buckets.
- Dark Web & Credential Monitoring: Real-time discovery of leaked employee credentials, compromised session tokens, and discussion on illicit forums.
- Executive Reporting: Automated risk scorecards with remediation playbooks for executive leadership and engineering teams.

3. Mandatory Certifications

- Must support CMMC Level 3 and NIST SP 800-171 compliance verification.
- All testing agents must support cryptographically signed audit logs for legal defensibility.

4. Submission Instructions

- Send proposals to nathan.drake@omnicyber.com by December 15, 2026.
- Proof of Concept: Shortlisted vendors must run a non-destructive scan against a designated test perimeter.
